What is Cybersecurity? The state of being protected against the criminal or unauthorized use of electronic data, or the measures taken to achieve this. In 2021, Cyber attacks cost \$6 trillion, that amount is estimated to go up to \$10 trillion by 2025.

A few of the many techniques and safeguards Jay mentioned included:

- Layers of Security
- Next Generation Firewall
- Make sure you are using MFA
- Change passwords every 90 days
- Be aware of latest phishing scams
- Back up your data
- Do not use public Wi-Fi for anything but browsing
